

WMCAT is looking forward to having two unique volunteers to teach two sessions of video game design.

Session 1: April 14, 21, May 5, 12 from 3:00pm – 5:00pm

Session 2: Summer – dates and time flexible

WMCAT is helping urban teens in our community realize their true potential. By offering engaging classes after-school in art and technology, students are given the opportunity to express themselves, build self-esteem, and be a part of meaningful activities in an environment that is inspiring and full of hope.

WMCAT works high school students with varying technology skills and experience. Students who participate in this will have a keen interest in video game design, but the class should be taught at an introductory level.

Class goal: to create either a group video game or individual games.

An ideal volunteer instructor will have the ability to:

- Feel comfortable working with urban youth
- Have good listening and communication skills
- Provide meaningful instruction to students
- Mentor urban youth
- Successfully complete a background check
- Provide technical assistance and expertise
